

Herd Vaccination General Guidelines

This is a basic, minimum program

Open heifers greater than four months old and one month before breeding:

- At least two doses modified-live Nine Way vaccine two to four weeks apart.

Bred heifers:

- Killed Nine Way vaccine 2 weeks to 2 months before calving.

Cow herd:

- Killed Nine Way vaccine twice a year or
- Modified-live Nine Way vaccine at thirty days fresh and killed Nine Way vaccine at approximately two hundred days fresh.

Also consider vaccinating with J5 or Endovac Bovi for coliform mastitis, Clostridium seven-way for sudden death, Scourguard 3KC for calf scours and for rabies.
